

Thymeleaf

- Définition de mapping

```
@GetMapping(value = {"", "/index"})
public String index(Model model) {

    model.addAttribute(attributeName: "message", message);
    model.addAttribute(attributeName: "author", author);
    model.addAttribute(attributeName: "curse", curse);
    model.addAttribute(attributeName: "title", title);

    return "index";
}
```

- Écriture du template

```
<!DOCTYPE HTML>
<html xmlns:th="http://www.thymeleaf.org">

<head></head>
<body>
<h1 th:text="${title}"></h1>
<main>
    <span></span>
</main>
<footer>
    <span th:text="${author}+ ' - ' +${curse}"></span>
</footer>
</body>
</html>
```

Thymeleaf text

- Symbole de récupération du modèle : \$
- Binding de texte
 - `<div>[[${author} + ` - ` + ${curse}]]</div>`
 - `<div>[[|${author} - ${curse}|]]</div>`
 - `<div th:text='${author} + ` - ` + ${curse}'>...</div>`
 - `<div th:text='|${author} - ${curse}||'>...</div>`
